

InTray[®] COLOREX[™] Yeast

For the rapid isolation and differentiation of clinically significant *Candida* species. Suitable for direct streaking.

Engineered to streamline your in-house workflow, COLOREX Yeast is used to differentiate various *Candida* species with a chromogenic media. Its unique resealable environment can incubated for growth — then placed directly on the microscope for observation results. Experience easy preliminary detection with distinctive color and morphology.

Streamlined Workflow

- A single exposure system formulated to produce distinctive chromogenic colony growth
- Easy macroscopic presumptive identification

Convenience

- COLOREX Yeast has a 12-month refrigerated shelf life from the date of manufacture
- Ready-to-use diagnostic test medium: no plate preparation of medium necessary
- Observe InTray directly on microscope stage
- Use directly at the point-of-care: then culture and identify in your clinic

Results

Makes in-house screening and organism identification easy — by producing chromogenic differentiation between species

Availability

20 pack

11-113-002

Green
C. albicans
ATCC 60193

Metallic Blue
C. tropicalis
ATCC 66029

Pink, fuzzy
C. kreusei
ATCC 14243

White to Mauve
C. glabrata
ATCC 2001

INHIBITED
E. coli
ATCC 25922
